

AZURE FOUNDRY LAB – 4

Title :

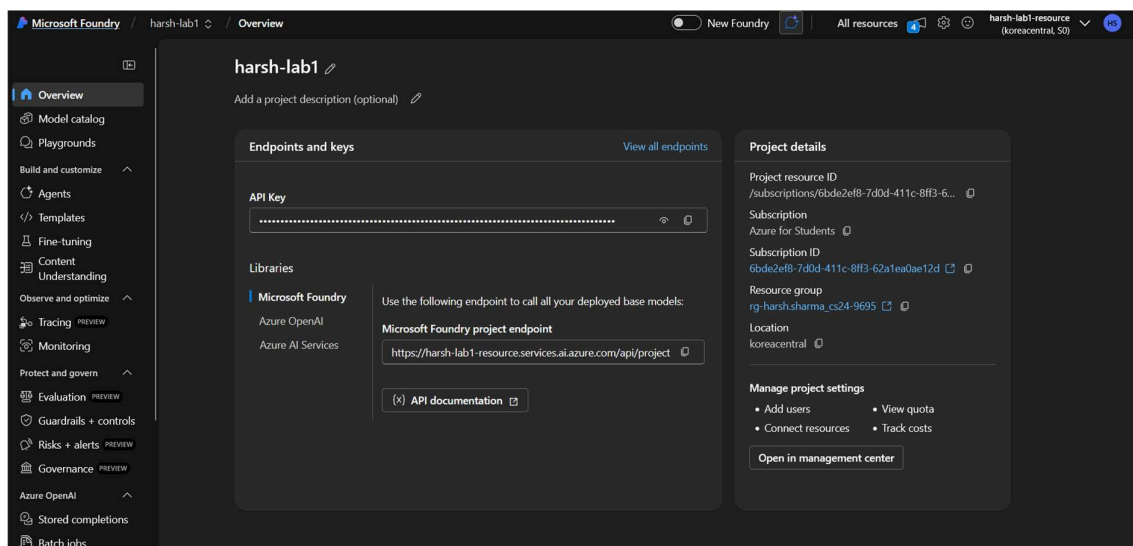

Create a Hub in Azure AI Foundry platform.

Objective :

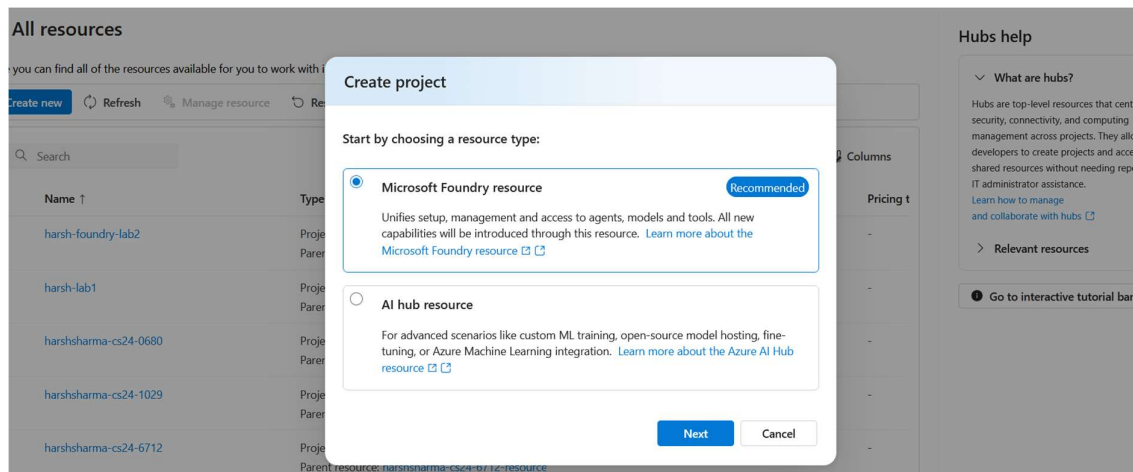

To create an AI Hub and Project in Azure AI Foundry and understand how Azure resources, AI services, and project configurations are managed within a centralized AI development environment.

Tasks Performed :

1. Opened Azure AI Foundry and accessed the platform dashboard to begin the AI Hub creation process.

2. Initiated the creation of a new AI Hub resource in Azure AI Foundry by selecting the AI Hub resource option from the resource creation wizard.

3. Configured project settings including hub name, subscription, region, resource group, and Azure AI Foundry resource details before deployment.

Create a new project

Your Microsoft Foundry project is where you'll work, collaborate, and connect to data and other services.

Project name * ⓘ

4. Submitted the configuration and initiated deployment of the AI Hub and associated Azure AI Foundry resources.

5. Successfully created and deployed a new AI project and Hub within Azure AI Foundry. The project was configured with Azure OpenAI capabilities, endpoint access, subscription settings, and associated Azure resources.

Results :

1. Successfully created a new AI project in Azure AI Foundry.
2. Configured subscription, region, resource group, and Azure OpenAI services.
3. Generated project endpoints and API access credentials.
4. Verified project deployment and successful resource provisioning.
5. Accessed the project dashboard and reviewed available AI capabilities.

Conclusion :

This lab demonstrated the creation of an AI project and Hub in Azure AI Foundry. The platform automatically configured the required Azure resources and provided access to Azure OpenAI services, endpoints, and project management tools. The exercise highlighted how Azure AI Foundry enables centralized AI development and resource management.
